Q96 English language

Comprehension: Read the given passage and answer the questions that follow. The gig economy represents a transformative shift in contemporary labor markets, characterized by short-term, task-based employment mediated largely through digital platforms. Unlike traditional employment structures that emphasize long-term contracts and organizational loyalty, the gig economy prioritizes flexibility, autonomy, and on-demand labor. Platform-based companies such as Uber, Zomato, and Upwork exemplify this model by efficiently matching service providers with consumers through technology. A key strength of the gig economy lies in its ability to enhance labor market efficiency. It lowers entry barriers, enables income diversification, and offers workers greater control over their schedules. For businesses, it reduces operational costs and allows rapid scaling in response to market demand. In developing economies, the gig model has also contributed to employment generation and digital inclusion. Despite these advantages, the gig economy raises serious socio-economic concerns. Gig workers are typically classified as independent contractors, which excludes them from labor protections such as minimum wages, job security, social insurance, and collective bargaining rights. Income volatility, algorithmic management, and power asymmetry between platforms and workers further exacerbate vulnerability. Over time, this may deepen inequality and weaken traditional labor institutions. In essence, while the gig economy reflects innovation and adaptability in the modern economy, its long-term sustainability depends on balanced regulation. Ensuring worker protection without undermining flexibility is crucial for making this evolving labor model equitable and inclusive. SubQuestion No : 16 Q.16 Which assumption most strongly supports the argument that the gig economy improves labor market efficiency?

- A. Governments fully regulate platform-based work
- B. Gig workers prefer unstable income over fixed salaries
- C. Digital platforms can rapidly match labor supply with demand ✓
- D. Traditional jobs are becoming obsolete
