Comprehension:

Read the given passage carefully and answer the questions that follow.

Water stress happens when the demand for clean, usable water is greater than the available supply. It may result from a lack of rainfall, overuse of water resources, or poor infrastructure. Many communities face water shortages that affect health, hygiene, and daily living. Agriculture uses most of the world's freshwater, followed by industry and homes.

Climate change is making water stress worse by causing unpredictable rainfall, floods, and droughts. As temperatures rise, water supplies shrink, while population growth increases demand. Some countries, like the UAE, use ocean desalination to meet their needs, but this process is expensive and uses a lot of energy. Poorer areas often lack the resources to build or maintain clean water systems.

Water stress can lead to serious problems like disease, hunger, and even conflict. In many places, people are forced to migrate due to unsafe water. Solving this issue requires strong international cooperation and smarter water management.

India has made several laws to protect its forests and wildlife. These laws help control deforestation and protect animals and their homes. The Indian Forest Act, 1927, is one of the oldest laws. It explains how forests should be used and protected. It also created three types of forests: reserved, protected, and village forests.

The Forest Conservation Act, 1980, was made to stop forest land from being used for other purposes. It says that the Central Government must approve before any forest land is cleared. It also started the Compensatory Afforestation Management and Planning Authority (CAMPA), which helps grow trees where forests were cut.

The Wildlife Protection Act, 1972, protects animals and birds. It bans hunting and allows the government to create national parks and sanctuaries. These laws are important because they help save nature, support wildlife, and protect our forests for the future.
