Comprehension:

Read the passage carefully and answer the questions that are given below.

Global warming refers to the rise in Earth's average surface temperature due to human activities. Since the Industrial Revolution, burning fossil fuels like coal and gas has released greenhouse gases such as carbon dioxide into the air. These gases trap heat in the atmosphere, causing the planet to warm faster than before.

Scientists worldwide have gathered data for years and found strong evidence that human actions are the main cause. The Intergovernmental Panel on Climate Change (IPCC) reported that global temperatures have already risen about 1.07 °C since the 1800s. This could lead to rising sea levels, extreme weather, and loss of biodiversity.

To avoid the worst effects, countries joined the Paris Agreement, aiming to keep global warming below 1.5 °C above preindustrial levels. The treaty encourages governments to reduce carbon emissions and support green technologies. Individuals can also help by using energy-efficient appliances, reducing car use, or signing online climate petitions.

Comprehension:

Read the passage carefully and answer the questions that are given below.

Eating healthy food is important for good health, but many people today are becoming more dependent on junk food. Children and adults often eat chips, burgers, pizza, and soft drinks during special occasions. These foods may taste good, but they lack essential nutrients and can lead to serious health problems.

Regular consumption of junk food can cause obesity, high blood pressure, diabetes, and heart diseases. It also affects the digestive system, causing problems like constipation and acidity. Junk food is high in saturated fats, sugar, and salt, which can lead to kidney disorders, skin issues, and even mental health problems such as poor concentration and mood swings.

To stay healthy, it is important to avoid junk food and follow a balanced diet that includes fruits, vegetables, grains, and proteins. Parents should guide children to develop good eating habits from an early age to lead a healthy and active life.

Read the passage carefully and answer the questions that are given below.

Eating healthy food is important for good health, but many people today are becoming more dependent on junk food. Children and adults often eat chips, burgers, pizza, and soft drinks during special occasions. These foods may taste good, but they lack essential nutrients and can lead to serious health problems.

Regular consumption of junk food can cause obesity, high blood pressure, diabetes, and heart diseases. It also affects the digestive system, causing problems like constipation and acidity. Junk food is high in saturated fats, sugar, and salt, which can lead to kidney disorders, skin issues, and even mental health problems such as poor concentration and mood swings.

To stay healthy, it is important to avoid junk food and follow a balanced diet that includes fruits, vegetables, grains, and proteins. Parents should guide children to develop good eating habits from an early age to lead a healthy and active life.
