Comprehension:

Read the given passage carefully and answer the questions that follow.

The rule of law is a foundational principle of democracy. It means that laws govern everyone equally, limiting the use of arbitrary power. However, the law is not applied automatically. It is shaped by a society's history, politics, and power structures.

History reveals that laws have often been used to exclude people. In the past, discriminatory rules were legally sanctioned to restrict voting and property rights. These examples prove that legality does not always guarantee justice. Instead, laws often reflect the moral assumptions of their time.

Judicial interpretation also plays a major role. Judges do not just apply rules; they explain what the language means as social values evolve. Public confidence in the system depends on fairness. When enforcement is biased, the law loses its legitimacy. For the law to fulfill its promise, it must serve as a safeguard for all people rather than a mechanism of control.

Comprehension:

Read the below passage carefully and answer the questions that follow.

At dawn, the municipal park appears almost theatrical, a stage where ordinary residents rehearse their private rituals before the city fully wakes. Elderly walkers trace the gravel paths with deliberate steps, comparing blood pressure readings as if they were cricket scores. A gardener waters beds of marigolds, directing the hose like a conductor guiding an orchestra of leaves. Near the pond, two teenagers practise photography, adjusting lenses to capture the mist lifting from the surface. None of them speaks loudly; the air seems to demand quiet civility. By eight o'clock, vendors roll in carts of tea and newspapers, and conversation begins to thicken like steam. The park gradually shifts from sanctuary to marketplace, yet its early gentleness lingers in memory. Observing this transformation each morning, I understand how public spaces teach patience, cooperation, and shared ownership without any formal instruction.
