Many farmers are turning to organic practices to reduce their environmental impact and meet growing demand for healthy food. In India, organic farming is gaining popularity, especially in states like Sikkim and Uttarakhand. Though the initial cost can be higher, the long-term benefits include better yields, improved health, and sustainable land use. Consumers are also more aware of what they eat and are willing to pay more for organic produce. Government schemes and training programmes now support farmers who want to shift to this method. As awareness increases, organic farming offers a healthier path for both people and the planet.

Comprehension:

Read the given passage carefully and answer the questions that follow.

Climate change is mainly caused by the burning of fossil fuels like coal, oil, and gas. These activities release greenhouse gases into the atmosphere, which trap heat and lead to rising global temperatures. As the earth warms, many weather patterns are becoming more extreme and unpredictable.

One major consequence of climate change is the increase in natural disasters. Higher temperatures cause more heatwaves and droughts, leading to wildfires and water shortages. Warmer oceans add energy to storms, making hurricanes and floods stronger and more damaging. These changes harm people, destroy homes, and damage crops.

Another serious impact is rising sea levels, caused by melting glaciers and expanding warm water. Low-lying cities and islands are already facing floods, damaging buildings and roads. Poorer communities suffer the most because they lack resources to recover or adapt. As temperatures continue to rise, these results are expected to worsen, making it urgent to take global action now.

Comprehension:

Read the given passage carefully and answer the questions that follow.

Climate change is mainly caused by the burning of fossil fuels like coal, oil, and gas. These activities release greenhouse gases into the atmosphere, which trap heat and lead to rising global temperatures. As the earth warms, many weather patterns are becoming more extreme and unpredictable.

One major consequence of climate change is the increase in natural disasters. Higher temperatures cause more heatwaves and droughts, leading to wildfires and water shortages. Warmer oceans add energy to storms, making hurricanes and floods stronger and more damaging. These changes harm people, destroy homes, and damage crops.

Another serious impact is rising sea levels, caused by melting glaciers and expanding warm water. Low-lying cities and islands are already facing floods, damaging buildings and roads. Poorer communities suffer the most because they lack resources to recover or adapt. As temperatures continue to rise, these results are expected to worsen, making it urgent to take global action now.

मानव जीवन में लक्ष्य निर्धारण उतना ही आवश्यक है जितना यात्री के लिए नक्शा। लक्ष्य के बिना प्रयास बहुत बार व्यर्थ सिद्ध होता है। महात्मा गांधी ने स्वतंत्र भारत का लक्ष्य रखा और अहिंसा से उसे साकार किया। उनके जीवन से सीख मिलती है कि दृढ़ लक्ष्य असंभव को संभव बनाता है। लक्ष्य चुनते समय अपनी रुचि, क्षमता और संसाधनों पर विचार करना चाहिए। लघु-अवधि और दीर्घ-अवधि दोनों प्रकार से लक्ष्य बनाए जा सकते हैं। जैसे विघ्न आने पर सकारात्मक दृष्टिकोण अपनाना समस्या को जल्दी हल करता है वैसे ही निरंतर प्रयास और आत्म-अनुशासन से लक्ष्य निश्चित रूप से प्राप्त होता है। लक्ष्य निर्धारण से आत्मविश्वास बढ़ता है और जीवन अर्थपूर्ण बनता है। बिना लक्ष्य के जीवन नीरस प्रतीत होता है। लक्ष्य प्राप्ति के लिए प्रगति का दैनिक लेखा-जोखा रखा जाना चाहिए। ऐसे में सफल व्यक्तियों की कहानियां पढ़कर भी प्रेरणा ली जा सकती है। लक्ष्य युवाओं के भविष्य का शिल्पकार है, उन्हें दृढ़ता से अपने हृदय में रखें और अग्रसर हों।
