#### Q51 English

Read the following passage carefully and answer the questions that follow.

In 2018, a young tigress disappeared from Bandhavgarh Tiger Reserve in Madhya Pradesh. For nearly three years, she was not seen in official records. In 2021, camera traps in Achanakmar Tiger Reserve in Chhattisgarh captured a tigress with cubs. Stripe patterns confirmed that she was the same tigress, later named Jhumri. She had travelled nearly 400 kilometres, likely in search of new territory after reaching dispersal age. Such movements are common when young tigers leave crowded areas to find space, food, and mates. Similar cases, like a male tiger moving from Kanha to Achanakmar, show that forest corridors still allow movement between regions. Chhattisgarh's tiger population, which had declined earlier, is now increasing due to better protection, improved habitats, and stronger anti-poaching efforts. However, experts stress that maintaining forest corridors is essential. These pathways help tigers move safely, find new territories, and reproduce, ensuring long term survival of tiger populations in central India.
