## Q44 English

Read the given passage and answer the questions that follow.

Air pollution is a major concern across Indian cities, with significant variations in air quality levels between large metropolitan areas and smaller cities. A new and alarming trend has emerged—smaller cities, once considered relatively cleaner, are now experiencing dangerously high pollution levels. Byrnihat, a small industrial town on the Assam-Meghalaya border, has emerged as India's new pollution hotspot, surpassing even Delhi in annual PM2.5 levels. According to the Central Pollution Control Board (CPCB), Byrnihat in 2024 recorded an alarming average PM2.5 concentration of  $133.4 \mu\text{g}/\text{m}^3$ , exceeding the national standard by a staggering 3.3 times. This marks a significant shift in India's air pollution crisis, as smaller towns are now registering pollution levels once thought to be a problem only for metro cities.

The air quality in Byrnihat has deteriorated to such an extent that a drastic 70 per cent reduction in PM2.5 levels is required to meet the annual standard.
