Q53 English

Read the following passage and answer the questions given below.

Urban green spaces, such as parks, gardens, and tree-lined streets, play a vital role in improving the quality of life in cities. They provide residents with areas for recreation, relaxation, and social interaction, contributing to both physical and mental well-being. In addition, green spaces help reduce air pollution, regulate temperature, and support biodiversity by offering habitats for various species. Despite these benefits, rapid urbanization has led to the reduction of such areas in many cities around the world. Expanding infrastructure and population growth often take precedence over environmental considerations. However, urban planners and policymakers are increasingly recognizing the importance of integrating green spaces into city development. Initiatives such as rooftop gardens, vertical forests, and community parks are being promoted to address this issue. By balancing development with environmental sustainability, cities can create healthier and more livable environments for present and future generations. These efforts require consistent planning, investment, and active community participation.

What is the central theme of the passage?

A. D. The growth of infrastructure in modern cities

B. A. The importance and preservation of urban green spaces

C. C. The decline of biodiversity in rural areas

D. B. The role of community parks in entertainment

Q54 English
