### Q52 English

Read the given passage and answer the questions that follow.

The Bermuda Triangle is a region in the western part of the North Atlantic Ocean, roughly bounded by Florida, Bermuda, and Puerto Rico. It has long been associated with mysterious disappearances of ships and aircraft. Several incidents reported in the twentieth century, including the sudden vanishing of vessels without clear explanation, have contributed to its reputation as a dangerous area.

Many theories have been proposed to explain these events. Some people believe in supernatural causes, such as alien activity or unknown forces. However, scientists suggest more logical explanations, including sudden weather changes, powerful ocean currents, and human error. The region is also known for its unpredictable storms, which can make navigation difficult.

Despite its mysterious image, there is no scientific evidence proving that the Bermuda Triangle is more dangerous than other parts of the ocean. Most experts agree that natural causes are sufficient to explain the incidents reported over time.

Which idea reflects a supernatural explanation mentioned in the passage?

A. Seasonal climate variation
